CERTIFICATE OF COMPLIANCE & TESTING

4" & 6" FLOOR TYPE PRESSURE RELIEF VALVES

Clow Valve Company supplies F1493-T Floor Type Pressure Relief Valves conforming to the following specifications:

The F1493-T Floor type hydrostatic pressure relief valve is designed for installing in the bottom of concrete tanks.

The assembly consists of three parts: cover, body and strainer. All three parts are of cast iron conforming to ASTM specifications A-126 Class B. They are designed so that neither the cover nor strainer can become separated from the body of the valve, due to groundwater pressure around the tank. However, when necessary, both may be easily removed by turning them to right or left to free them from locking lugs cast integrally on the inside of the body.

The seats are rubber, bonded to the cover, mating with an epoxy coated seat in the body.
